SKILLS

- Python
- SQL
- Pandas & NumPy
- Scikit-learn
- Machine Learning
- Flask & FastAPI
- Tableau
- Power BI
- Git & GitHub

LANGUAGES

- English
- Hindi

CERTIFICATIONS

- Google Analytics Certification – Google
- Python Essentials 1 – Cisco Networking Academy

ACHIEVEMENTS

Government of India Copyright
Registration – "AI-Based Brand/Logo
Detection & Obfuscation in Videos"

Profile

AI and Data Science student with practical experience in Python, SQL, Excel, Tableau, and machine learning. Enjoy building real-world projects in data analytics, forecasting, and computer vision, and always looking to learn new technologies.

Education

- Bachelor of Technology, Artificial Intelligence & Data Science**
Ajeenkya DY Patil University Pune | CGPA: 8.50/10 2022 – 2026
- Senior Secondary Certificate**
O. P. Jindal School Raigarh (C.G) | 77% 2021 – 2022
- Secondary Certificate**
O. P. Jindal School Raigarh (C.G) | 85% 2019 – 2020

Internship

- Jindal Steel** Jan 2026 – Jul 2026
 - Built a predictive maintenance solution to detect kiln accretion using industrial temperature data.
 - Created real-time dashboards for equipment monitoring and anomaly detection.
 - Used Python, LSTM, Flask, FastAPI, Plotly, and Scikit-learn to build and deploy the solution.

Projects

- Multi-Agent AI Data Analyst**
 - Developed a full-stack data analytics platform for CSV analysis, visualization, and AI-generated insights.
 - Implemented ML workflows and automated PDF reports using a multi-agent architecture.
 - Tech: Python, FastAPI, React, Plotly, Google Gemini.
- MarketMind – Stock Forecasting & Risk Analytics Platform**
 - Built a stock forecasting platform to predict future prices and analyze investment risk using machine learning.
 - Added interactive dashboards with forecasting charts, technical indicators, and AI-generated insights.
 - Used Python, Prophet, XGBoost, Flask, Plotly, and Scikit-learn for forecasting and visualization.
- ForgePredict AI – FI-Inspired Predictive Maintenance Platform**
 - Created an FI-inspired predictive maintenance platform to monitor industrial assets and identify potential failures.
 - Added real-time telemetry dashboards, Remaining Useful Life (RUL) prediction, and maintenance recommendations.
 - Used Python, XGBoost, Dash, Plotly, and Scikit-learn for predictive analytics and visualization.
- VisionSearch – AI-Powered Visual Product Search Engine**
 - Built an AI-powered visual search engine using ResNet-50, FAISS, and OpenCV to find visually similar products.
 - Added image embedding visualization, product catalog, and similarity search with an interactive dashboard.
 - Used Python, Flask, and deep learning techniques for fast and accurate image retrieval.
